The AI-First Shift: Turning Curiosity into Capability

**Vikas Surani**

Global Vice President – Growth | TEDx Speaker | IIMA

September 7, 2025

Hello Curious Minds,

I know how it often starts: *“Can I do this with AI?”*

A few experiments. Maybe an AI chatbot for customer queries. Some predictive analytics in a dashboard.

That’s a natural beginning—but here’s the challenge: most organizations have established processes that can’t be torn apart overnight. And that’s okay. Becoming AI-first isn’t about breaking everything—it’s about integrating AI into the way you already work, one smart step at a time.

What Does Practical AI-First Look Like?

✅ **Augment Decisions, Don’t Replace Them** Instead of replacing entire decision chains, use AI for speed and clarity. JPMorgan didn’t change its legal process overnight—it introduced AI to review thousands of contracts in seconds, reducing manual effort and freeing experts for strategy.

✅ **Enhance Customer Experience Without Rebuilding** **Everything** Netflix didn’t create a new platform for AI. It embedded AI into its existing recommendation engine, influencing 80% of what we watch today. The result? A better experience without a complete redesign.

✓ **Make Operations Smarter, Not Disruptive** Zara didn't throw out its supply chain—it layered AI to forecast demand, improve inventory accuracy, and respond to trends faster.

✓ **Build a Culture Where AI Feels Natural** Instead of forcing big-bang adoption, start with AI literacy programs and simple tools that help employees in their current roles. Curiosity and confidence will grow from there.

Common Pitfalls to Avoid

- ✗ Trying to automate everything at once → Creates chaos
- ✗ Ignoring data quality → AI won't work without clean, connected data
- ✗ Treating AI as IT's job → It's a business transformation, not a tech project

Practical Steps to Start Today

- ✓ Pick one high-impact process and add an AI layer to make it faster, smarter, or more predictive
- ✓ Audit your data readiness—good AI needs clean, structured data
- ✓ Upskill teams with AI basics so adoption feels easy, not intimidating
- ✓ Set clear governance and ethical guidelines from day one

My Take

AI-first doesn't mean rebuilding your entire business overnight. It means making your existing processes smarter, one layer at a time. The real opportunity is in combining what works today with the intelligence AI brings for tomorrow.

Alternate Thought – What If We Started From Scratch?

Here's a thought I keep coming back to: what if we had the freedom to redesign everything from the ground up—with AI at the core from day one? No legacy constraints, no patchwork. How would your processes look? What would you keep, and what would you throw away? I'll explore this in my next note. Stay tuned.

Until next time, stay curious, *Vikas Surani signing off.*

Agreed with your learnings and view **Vikas**, additionally we have seen it quite often mixing GPT with AI capabilities, and often AI is seen as replacement to our job, while all this time it is a tool that enables us to focus on more areas to improve efficiency I, a simple example can be doing data analysis of a dump and getting report which manuall ...more
