The Lifelong Learner's edge

**Vikas Surani**

Global Vice President – Growth | TEDx Speaker | IIMA

July 14, 2025

Hello, Curious Minds!

If there's one label I'm proud to wear, it's "lifelong learner." Not because it sounds good on a my profile, but because it's the only way I know to keep up, stay relevant, and—honestly—enjoy the ride.

Why Lifelong Learning Is Non-Negotiable

Here's a stat that stopped me in my tracks: According to the World Economic Forum, 50% of all employees will need re-skilling by 2025 as technology adoption accelerates. And LinkedIn's 2024 Workplace Learning Report found that 94% of employees would stay at a company longer if it invested in their learning and development.

Translation? The world isn't just changing—it's demanding that we change with it. The only real thing is the ability to learn, unlearn, and relearn. I've seen this firsthand: the people who adapt, who stay curious, are the ones who thrive, no matter what comes their way.

What Lifelong Learning Looks Like (For Real)

Forget the idea that learning stops after school or a certification. For me, it's about staying open, asking questions, and being willing to start from scratch—again and again. Some days, it's reading a new book or taking an online course. Other days, it's just listening to someone with a totally different perspective, or experimenting with a tool I've never used

—

before.

I recently challenged myself to learn the AI for Leaders—not because I had to, but because I wanted to see what all the buzz was about. The result? Not only did I pick up a new skill, but I also found fresh ways to solve old problems at work and strategic framework for enterprise wide adaption.

My Lifelong Learning Habits

Here's what's worked for me:

- **Stay curious:** I try to ask "why?" and "what if?" at least once a day.
- **Mix it up:** I learn from books, podcasts, colleagues, and even my kids.
- **Share what I learn:** Teaching or mentoring is the best way to lock in new knowledge.
- **Embrace being a beginner:** It's humbling, but it keeps me sharp.

The Ripple Effect

Lifelong learning isn't just about career growth (though that's a big part of it). It's about staying engaged, finding new passions, and building resilience for whatever comes next. Studies show that people who keep learning are not only more adaptable at work, but also report higher levels of happiness and mental agility as they age.

The Challenge (And the Opportunity)

Here's my challenge to you: Pick one thing you're curious about this week—no matter how small—and take a step to learn more. Read an article, watch a video, ask someone a question, or just try something new. You never know where it might lead.

Your Turn

What are you learning right now? How do you keep your curiosity alive? Share your favorite resources, habits, or stories—I'd love to hear how you're making lifelong learning part of your journey. Let's inspire each other to keep growing, no matter where we are in our careers.

Stay curious, Vikas
